Immersive 3D *E-Commerce Experience*

Luxury Watch Configurator Platform · Astronomia Dragon

P R E P A R E D F O R

A digital destination worthy of a high-complication timepiece.

A single digital destination where the product is experienced in three dimensions from the first second — not as a flat product page with a spin button, but as a cinematic, configurable, shoppable presentation. Visitors explore the watch as an object of craft, configure meaningful variants, isolate components for a closer look, and move naturally toward appointment, inquiry, or purchase — on desktop, mobile, and through optional AR and print touchpoints.

"Immersive commerce built for considered purchase — where education, emotion, and configuration happen in one continuous flow."

Nine differentiators.

Each capability below answers the question luxury brands ask of every digital investment: does this make the product feel rarer, or does it commoditise it?

- **3D-first, not 3D-added**
The watch is the hero of the page. Photography supports the experience rather than replacing it.
- **True variant configuration**
Dragon finishes and case metals update in real time. No pre-rendered stills per SKU.
- **Shareable configurations**
Any build can be saved and sent via link or QR — ideal for concierge, retail partners, and follow-up.
- **Activated Print**
Magazines, postcards, stickers, and collateral become interactive entry points into the same experience.
- **Optional AI concierge**
Text and voice assistant for product Q&A and booking, connected to your existing systems.
- **Holographic part inspection**
Shoppers isolate dragon, case, movement, dial, globe, strap and more — a "museum case" moment competitors rarely offer online.
- **Scroll-driven storytelling**
Editorial narrative panels over the live 3D scene build desire and comprehension before configuration.
- **AR-ready journey**
View in AR from the configurator (phone handoff / in-space preview) with a path to full try-on in a later phase.
- **Self-service admin**
Your team updates copy, lighting, models, and feature toggles without a dev cycle for every tweak.

What the shopper sees.

01

The Reveal

Full-screen 3D hero with the complete watch, subtle motion, and scroll-linked animation (exploded view on scroll) dramatising complexity without leaving the page. Premium typography and brand framing; key specifications surfaced discreetly at the sides on desktop.

02

The Craft Narrative

Glass-style editorial panels appear over the continuing 3D scene as the user scrolls. Each chapter covers a pillar of the product — hand-engraved dragon, movement, globe, sapphire architecture — with optional highlight metrics. Designed to feel like a digital maison brochure, not a generic template.

03

Make It Yours

The core conversion engine. Dragon variants, case and movement metals, globe handling, live 3D assembly, inspect mode for component isolation, reset view, canvas backgrounds, edition + reference line, and copy-link sharing — all in one cohesive interface.

04

Specifications & Closing

An exact accounting: structured specifications table, appointment CTA with primary and secondary actions, boutique footprint copy. Optional Activated Print showcase block explaining how print collateral connects to the digital experience.

05

Mobile & Tablet

Layout adapts so the 3D viewport and controls fit one screen on phones. Performance tiering delivers stable, representative experience on iOS and Android while desktop shows the fullest visual fidelity. AR handoff optimised for phone via QR and native viewers.

From the page to the wrist, in two phases.

PHASE A · INCLUDED IN CORE PACKAGE

Configurator AR

View in AR from the configurator after the shopper has chosen dragon and metal. On desktop, a QR code opens the exact configuration on the shopper's phone. On mobile, the experience launches directly into platform AR — Quick Look on iPhone, Scene Viewer on Android — with sensible real-world scale and placement guidance for a luxury watch. Admin controls govern AR scale, shadows, and whether to use a shared optimised model or per-configuration assets.

PHASE B · FOLLOW-ON DELIVERY

Full Watch Try-On

Wrist-scale try-on AR with further model adaptation and optimisation. Recommended as a second delivery so the immersive site and configurator can launch on schedule, with try-on developed in parallel as stage two.

Offline to online, one continuous artefact.

Static luxury print becomes a measurable digital touchpoint. Any cover image, postcard, sticker, or ad unit can trigger the same 3D and configurator experience via QR or smart link. An editorial poster section on the site demonstrates the concept — image, headline, explanation. Ideal for magazine inserts, event materials, boutique leave-behinds, and partner co-marketing.

THE PRINCIPLE

One creative asset. One scan. The full product story and configuration — not a generic landing page.

Magazine inserts

Premium editorial integrated with editorial 3D experience.

Event materials

Boutique events extend into a take-home digital encounter.

Partner co-marketing

Each impression measurable, each scan attributable.

An AI concierge that speaks the maison.

A natural upsell on the same property: a concierge that answers questions on complications, materials, edition size, boutique availability, and configuration choices — and books viewings or captures lead details when intent is high. Text, voice, or both, with optional integrations into CRM, email, calendar, or internal concierge workflows.

Product Expert

Complications, materials, edition size, boutique availability.

Booking Agent

Schedules viewings, captures lead details, hands off to concierge.

Voice or Text

Suited to high-touch clientele who expect white-glove service online.

Self-management without the dev cycle.

A password-protected workspace so your marketing, digital, and product teams own the experience without opening tickets for every update. Live previews of hero and configurator while editing.

FEATURES & TOGGLES

- AR button on or off globally
- Developer diagnostics visibility
- Asset quality strategy per device tier

CONTENT (NO CODE)

- SEO, header, hero, story panels
- Configurator copy, specifications, CTA
- Activated Print section copy and assets

SCENE & PRESENTATION

- Hero scale, sway, lighting, exposure
- Configurator lighting and backgrounds
- Per-platform model quality presets

3D MODEL MANAGEMENT

- Per-part uploads with drag-and-drop
- Hero, AR, dragon, metal, dial slots
- External CDN URL fallback per slot

AR SETTINGS

- Real-world scale, shadow, preview behaviour
- Shared vs per-configuration AR models
- Optional external AR link (open in new tab)

BRAND & THEME

- Core color tokens and typography alignment
- Consistent maison-dark luxury out of the box
- Reset to approved baseline in one click

Control and discretion, without technical complexity.

- **New dragon finish or metal launch**

Upload models and update copy in one session — no developer cycle.

- **Boutique event**

Shareable configuration links and Activated Print assets without redeploying the site.

- **Seasonal campaign**

Adjust lighting, backgrounds, and hero copy to match creative briefs.

- **Regional rollout**

Toggle features such as AR per market when required.

Luxury brands need control and discretion. The admin console delivers both without exposing technical complexity to end users.

PACKAGE STRUCTURE

Modules, sequenced for momentum.

MODULE	SUMMARY	PHASE
Core Immersive Site	Hero, story scroll, specifications, CTA, responsive layouts.	CORE
3D Configurator	Variants, inspect / X-ray, share links, backgrounds.	CORE
AR (Configurator-Led)	QR handoff, mobile AR launch, admin tuning.	CORE
Admin Console	Full self-management as detailed in section 07.	CORE
Activated Print	Collateral strategy plus on-site showcase section.	CORE
AI Concierge	Q&A and booking, voice or text. Optional.	OPTIONAL
Watch Try-On AR	Full wrist try-on after model pipeline. Phase 2.	PHASE 2

INDICATIVE TIMELINE

Core package and admin deployable within approximately four weeks. Try-on AR developed in parallel as stage two.

What changes when the experience ships.

01 Higher engagement

Time on page and interaction depth exceed static product-page benchmarks.

02 Stronger consideration

Shoppers understand why the watch is exceptional before they configure.

03 Concierge-ready sharing

Exact configurations in a link for sales teams and clients.

04 Omnichannel coherence

Print, web, and AR tell one continuous story.

05 Operational independence

Your team runs content and assets through admin — not change requests.

Not a product viewer bolted onto a website.

A luxury-native, 3D commerce platform: cinematic opening, editorial story, real-time configuration, holographic inspection, shareable builds, AR handoff, optional print activation, and AI concierge — with an admin console designed so the maison stays in control.

We recommend packaging the immersive site, configurator, AR entry point, Activated Print, and admin as the first release, with full watch try-on AR as the natural second act once assets are production-optimised for every device.

Begin the conversation.

A live demonstration is the fastest way to convey what this is. Forty-five minutes — desktop, phone, AR, admin — end to end.

MEDIALIFE AI

Immersive commerce, 3D product configuration, AR delivery.
